

The drawings above show very simple arrangements using the CDU and two points motors. There could of course be many, many more than this in a layout.

The CDU HD can operate up to SIX motors simultaneously. With one operation of a switch.

The diagram shows passing type of switches ie. Hornby R044, the switches however could be miniature toggles or push buttons.

If you are using the CDU with our points position indicator the DC- connection on the CDU would connect to the 0v DC power input on the indicator board.

The CDU can also operate with a DC supply in this case the connections are:

All wiring should be to 16/02mm minimum or better still 24/02mm
